

Hello future students!

I am so happy you have chosen to challenge yourself and take AP Chemistry the 2017-2018 school year. We will learn much and have fun doing it. The opportunity that you are taking for yourself will give you many advantages in college. Should you apply yourself and do well on the AP exam, many schools will let you out of the first year of college chemistry! This will save you money and time in the college classroom. If you decide to take college chemistry, you are sure to be at the top of your class and create a good first impression and a confident attitude as you establish yourself in your post high school endeavors. Either way, the work you put in this year in AP Chemistry will be valuable and well worth it. As required by the district, and to help ensure we have enough time to cover the necessary material, we will need to complete some summer work. If you should need any help, I am always available by email at hboston@d230.org. This will help you review the material you learned in first year chemistry. Hope you enjoy your summer and look forward to learning a lot next year!

Sincerely,

Heather Boston
